YOU!
.....

COCKATOO

FLYING FEATHERS

Cockatoos, like other parrots, have special feet where two toes are pointed forward, and two are pointed backward. These feet, along with a strong bill, allow them to climb through the trees towards seeds and fruits. Why climb when you can fly? The forests they live in are so dense and thick, that sometimes climbing is easier than flying!

**PICK A PATH
TO LEAD THE
COCKATOO TO
THE APPLE!**
